## Li Labs

Enterprise Application Experts

## Eliminate guesswork

BI solutions allow companies to make informed choices by providing historical analysis, real-time updates, trending, forecasting and predictive analytics.

## Key business metrics where and when you need them

Our BI solutions provide users access to key reports, dashboards, metrics and KPI's from mobile devices and the majority of web browsers.

## Triggers and alerts

Our Business Intelligence solutions can provide alerts based on key metric triggers and can email or Text Message so you are aware of your business performance at any time of the day.

## Identify Opportunities

With detailed insights into your companies performance, it is easy to identify and make necessary changes to streamline operations. BI Solutions empower staff to make informed decisions.

## Consolidate Insights from multiple companies, divisions and systems

Consolidation and aggregation are some of the more powerful aspects of a true BI solution. The ability to rollup and view the true position of your company on a daily basis across multiple divisions allows you to anticipate and plan accordingly.

### Your sales team, on steroids.

Mobile applications can give your sales team the tools to provide insight, data, marketing materials and relationship information directly from your CRM, or back office system. Enterprise apps can provide the tools needed to exceed targets while encouraging productivity and driving results.

### Your data, anywhere and anytime.

Mobile apps enable access to critical business systems and data. Give managers insight into statistics and operations through dashboards. Business intelligence apps provide the right information at the right time.

### A perfect product catalog.

With mobile apps, paper catalogs are the thing of the past. Instant updates and real-time inventory/stock status give your employees the ability to present your products to your customers in a unique way.

### Back office processes, on the road.

With mobile applications, you can manage and execute day to day tasks while you are out of the office. Connectivity to business systems, operations and process are managed in a completely new and innovative way. Make your office mobile without reimplementing your systems.

### Training on the job, at the job.

Mobile apps can provide training materials which can ensure employees are ready to tackle any job at hand. Add work flows and playback media content to provide a interactive learning experience.
